ERP Readiness Checklist

15 questions to answer honestly before you start evaluating vendors.

1. Data & process

- ■ Current inventory or customer data is centralized, not scattered across spreadsheets
- ■ Core business processes are documented, even informally
- ■ You know which reports your team checks every week

2. Team & stakeholders

- ■ A project owner is identified internally
- ■ Department heads (ops, finance, HR) are aligned on the goal
- ■ Staff who'll use the system daily are involved early — not just leadership

3. Systems & data migration

- ■ You have a list of every current tool or spreadsheet handling this data today
- ■ Historical data volume is roughly known (years of records, approximate row counts)
- ■ There's a plan for a cutover period running old and new systems in parallel

4. Budget & timeline

- ■ Budget is set aside for implementation, not just software licensing
- ■ A realistic go-live window is agreed internally (weeks, not days)
- ■ Someone owns training the rest of the team before go-live

5. Vendor evaluation

- ■ You know which specific modules you need first
- ■ You've asked vendors about industry-specific configuration, not just generic features
- ■ You've asked about data ownership and export terms before signing anything

---

How to read your results

0–5 checked: You're early — start by cleaning up one module's data (usually inventory) before evaluating vendors.

6–10 checked: You're ready to scope a phased rollout with a vendor.

11–15 checked: You're ready to move quickly — most implementation risk is already handled.
